PROFESSIONAL SUMMARY

IT graduate and full stack developer with hands-on experience analysing business data, building reporting and automation workflows, and supporting cross-functional stakeholders. Currently completing a machine learning internship applying real search-intelligence data to build and evaluate ML pipelines, with further practical exposure to data pipelines, dashboarding, and AI-assisted data classification through project work integrating SQL, Power BI, Apache Kafka, and REST APIs. Strong analytical, documentation, and communication skills, with a structured, self-driven approach to learning new tools and translating business needs into technical solutions. Seeking to apply these skills to identify and support AI, automation, and process-improvement opportunities as an AI Junior Analyst.

KEY SKILLS

- **AI & Machine Learning:** Applied ML task framing, feature engineering, data-leakage prevention, baseline vs. model evaluation, Logistic Regression, Decision Tree, Random Forest, Gradient Boosting, scikit-learn, pandas
- **AI & Data Analysis:** AI-assisted data classification and extraction, data cleaning and structuring, ETL processes, requirements gathering, reporting and dashboarding (Power BI)
- **Automation & Process Improvement:** Workflow automation, real-time data pipelines (Apache Kafka), process documentation, testing and validation of tools and workflows
- **Programming & Development:** SQL, JavaScript, C#, Python (incl. pandas, scikit-learn), React.js, HTML/CSS, REST APIs, OOP concepts
- **Databases & Cloud:** MySQL, MongoDB, Firebase Realtime Database, Microsoft SQL Server, Oracle Database
- **Tools & Reporting:** Git & GitHub, Microsoft Excel (Advanced), Power BI, Microsoft Word/PowerPoint/Project
- **Professional Strengths:** Analytical and structured problem-solving, clear technical and non-technical communication, stakeholder collaboration, self-driven, adaptable to new tools and platforms

PROFESSIONAL EXPERIENCE

Machine Learning Intern (AI Engineering Track) — FlyRank AI (Remote)

Jul 2026 – Present

- Completing a hands on machine learning internship, applying real search-intelligence data (Search Console, Analytics, BigQuery warehouse, Hugging Face datasets) to build and evaluate end-to-end ML pipelines.
- Framed a search-analytics research question into a concrete ML task, defining the unit of analysis, prediction target, success metric, and business action supported by the output.
- Wrote a data contract for a search-intelligence dataset slice, verifying data grain, availability, and date coverage through SQL queries, then engineered features validated against data-leakage risk.
- Built a baseline rule-based action-scoring system with reason codes and validated signals, then critically reviewed top-ranked outputs for accuracy.
- Developing and evaluating supervised ML models (Logistic Regression, Decision Tree, Random Forest, Gradient Boosting) against the baseline using grouped validation and permutation importance for feature interpretation.
- Working in Python (pandas, scikit-learn) within Google Colab, with all deliverable's version-controlled and documented on GitHub.

Full Stack Developer and Data Analyst — SneakyFinds Pty Ltd

Jan 2025 – Dec 2025

- Analysed order and inventory data to identify process inefficiencies, then designed and built automated order-tracking workflows to resolve them.
- Built executive-facing dashboards translating raw business data (profit, cost, product performance) into clear reporting for leadership decision-making.
- Diagnosed and documented system issues, working directly with stakeholders to prioritise fixes and validate solutions before rollout.

- Collaborated with company leadership to gather requirements and translate business needs into structured technical solutions.

Freelance Web Developer — Self-employed

Jan 2024 – Present

- Gathered and documented client requirements, then designed and implemented digital workflow and automation solutions to improve operational performance.
- Integrated third-party APIs and real-time cloud databases (Firebase) across multiple client projects, testing and validating functionality prior to deployment.
- Communicated technical solutions and progress updates to non-technical stakeholders in clear, structured terms.

RELEVANT PROJECTS

- **ClearVue Sales Reporting System — SQL, MongoDB, Apache Kafka, Power BI:** Built an enterprise reporting application integrating multiple databases and an event-streaming pipeline to structure sales data and support decision-making through Power BI dashboards.
- **API-Driven Movie Reviews Data Integration (NYT & TMDb) — Google Apps Script, REST APIs, AI-assisted classification:** Built an automated ETL pipeline that processed JSON API data, applying filtering, transformation, and AI-assisted classification to structure and enrich a review dataset for analysis.
- **Internship & Job Portal (Group Project) — HTML, CSS, JavaScript, REST APIs:** Built responsive frontend components connected to a Django REST API, documenting requirements and features for role-based functionality.
- **Wow Foods E-Commerce Platform — React.js, Firebase, JavaScript:** Built a food-ordering platform with authentication, real-time order updates, and admin dashboards for operational reporting.
- **Lords Driving School Booking Website — React.js, Tailwind CSS, Firebase:** Developed a scheduling and authentication website with a fully responsive, tested user interface.

EDUCATION & CERTIFICATIONS

- Bachelor's Degree in Information Technology — North-West University, Vanderbijlpark, South Africa (Feb 2023 – 2025)
- Full Stack Developer Certificate — FNB App Academy (IT Varsity), July 2025 (Credential ID: 68818862C227C)
- Introduction to SQL — SoloLearn, January 2026 (Credential ID: CC-X2NZGXS9)
- Basics of Data Analysis with Excel — Alison, April 2026 (Credential ID: 6112-55564236)
- Quantum Computing and Programming — QWorld, July 2023 (Credential ID: QBronze109-139)
